Patch immediately: CVE-2025-25257 PoC enables remote code execution on Fortinet FortiWeb

Security Affairs - 13 July 2025 19:10

PoC exploits released for critical Fortinet FortiWeb flaw allowing pre-auth RCE. Fortinet urges users to patch. Proof-of-concept (PoC) exploits for CVE-2025-25257 in Fortinet FortiWeb (CVSS 9.8) enable pre-auth RCE on vulnerable servers.

<u>Critical Wing FTP Server Vulnerability (CVE-2025-47812) Actively Being Exploited in</u> the Wild

The Hacker News - 11 July 2025 17:28

A recently disclosed maximum-severity security flaw impacting the Wing FTP Server has come under active exploitation in the wild, according to Huntress. The vulnerability, tracked as CVE-2025-47812 (CVSS score: 10.0), is a case of improper handling of null ('\0') bytes in the server's web interface, which allows for remote code execution.

Threat actors and malware

NVIDIA shares guidance to defend GDDR6 GPUs against Rowhammer attacks

BleepingComputer - 11 July 2025 12:39

NVIDIA is warning users to activate System Level Error-Correcting Code mitigation to protect against Rowhammer attacks on graphical processors with GDDR6 memory.

WordPress Gravity Forms developer hacked to push backdoored plugins

BleepingComputer - 11 July 2025 16:30

The popular WordPress plugin Gravity Forms has been compromised in what seems a supplychain attack where manual installers from the official website were infected with a backdoor.

Iranian-Backed Pay2Key Ransomware Resurfaces with 80% Profit Share for Cybercriminals

The Hacker News - 11 July 2025 17:16

An Iranian-backed ransomware-as-a-service (RaaS) named Pay2Key has resurfaced in the wake of the Israel-Iran-U.S. conflict last month, offering bigger payouts to cybercriminals who launch attacks against Israel and the U.S.

Increase in Identity-Based Attacks Attributed to Infostealers

Security Magazine - 11 July 2025 10:00

Info-stealing malware and advanced phishing kits account for 156% increase in cyberattacks that target user logins.

UK incidents
