[Critical Juniper Networks PTX flaw allows full router takeover](#)

BleepingComputer - 26 February 2026 12:42

A critical vulnerability in the Junos OS Evolved network operating system running on PTX Series routers from Juniper Networks could allow an unauthenticated attacker to execute code remotely with root privileges.

[Trend Micro fixes two critical flaws in Apex One](#)

Security Affairs - 26 February 2026 22:35

Trend Micro has addressed two critical vulnerabilities in Apex One that could allow attackers to achieve remote code execution on affected Windows systems. The company released security updates and strongly urged customers to apply the patches promptly to prevent potential exploitation and protect their environments from compromise.

[Cisco SD-WAN Zero-Day Under Exploitation for 3 Years](#)

darkreading - 26 February 2026 22:45

The maximum-severity vulnerability CVE-2026-20127 was exploited by an unknown but sophisticated threat actor who left very little evidence behind.

Threat actors and malware

[Ransomware payment rate drops to record low as attacks surge](#)

BleepingComputer - 26 February 2026 10:00

The number of ransomware victims paying threat actors has dropped to 28% last year, an all-time low, despite a significant increase in the number of claimed attacks.
