Weekly Vulnerability Report

6 April 2026

This report summarizes the Common Vulnerabilities and Exposures (CVEs) which have been modified by the [National Vulnerabilities Database \(NVD\)](#) in the past month. This data can help users prioritise and manage the vulnerabilities that might pose a risk to their organisations.

The report includes a breakdown of the number of CVEs by vendor (top ten) and a table which displays the highest priority CVEs. These include:

- CVEs that have been added by CISA to the [Known and Exploited Vulnerability catalogue \(CISA KEV\)](#), or
- CVEs with a [Common Vulnerability Scoring System \(CVSS\)](#) score above or equal to 6 and an [Exploit Prediction Scoring System \(EPSS\)](#) score above or equal to 0.2

Each CVE number in the table has a link to the vendor advisory where users can find mitigation or remediation guidance.

Count of vulnerabilities by software vendor (top 10)

About this data

This report brings together information from several sources including:

- CISA Known Exploited Vulnerabilities Catalog
- NVD - National Vulnerabilities Database
- FIRST - Exploit Prediction Scoring System (EPSS). EPSS is an estimate of the probability of the CVE being exploited in the wild in the next 30 days.

Note: The information in this report represents a snapshot in time and may become outdated by the time of publication as CVSS or EPSS scores are updated or new vulnerabilities are added to the Known Exploited Vulnerabilities Catalog.
